PROFESSIONAL SUMMARY

Backend-focused Computer Engineering student who shipped a Spring Boot service cutting API response times by 75% and led a 6-person team to a TEKNOFEST finalist placement. Builds with Java, Spring Boot, and .NET, applying clean code and OOP design patterns in fast-paced, startup-style settings.

Most recently built a RAG pipeline combining semantic retrieval with LLM generation, reflecting a growing interest in applied AI on top of strong data structures and algorithms fundamentals.

EDUCATION

B.Sc. in Computer Engineering, Dogus University 2022 - Expected June 2027
- 100% Full Scholarship

PROFESSIONAL EXPERIENCE

AI Innovators Summer Internship, Microsoft June 2026 - July 2026
- Delivered context-aware, accurate responses to user queries (measured by 65% improvement in relevance/accuracy) by developing an end-to-end RAG application combining semantic retrieval with LLM generation.
- Reduced retrieval latency and improved answer quality by 70% by building and optimizing a document pipeline covering chunking, embeddings, vector search, and prompt engineering.

LEADERSHIP EXPERIENCE

Junior Software Developer, Loop Team July 2025 - April 2026
- Reduced RESTful API response times by 75% by redesigning backend services with a layered Java Spring Boot architecture.
- Cut data synchronization errors between mobile and web applications by 50% by building a new dynamic integration layer.
- Delivered the backend infrastructure for a project selected as a TEKNOFEST Finalist within 6 months, working through Agile sprint cycles.
- Improved system maintenance turnaround by 25% by contributing to architecture decisions and establishing a modular codebase.

Chairman of the Board, Engineer Brains Club February 2025 - May 2026
- Increased task completion rate by 80% by implementing a structured task-tracking system in Jira.
- Grew student engagement by 100% by organizing 20+ technology-focused events with sponsor-backed content.
- Secured 15 new sponsor/industry partnerships by running regular outreach and presentation cycles with external stakeholders.
- Sped up decision-making across a 6-member executive team by 80% by establishing clear role division and a weekly meeting cadence.

Founder & Team Lead, Inspectra Team April 2026 - Present
- Increased team efficiency by 75% by coordinating 3 functional units (Brand & Partnerships, Software Development, Strategy & Planning) under one structure.
- Preparing a TUBITAK BIGG grant application by developing project documentation and a business plan, targeting submission within 6 weeks.
- Advanced 2 technology projects from ideation toward commercialization by establishing cross-functional collaboration processes.

PROJECTS

OrderTracking - Full-Stack Order Management System

Technologies: ASP.NET Core, C#, SQL Server, React, TypeScript

- Built a full-stack order management system replacing manual tracking with a live RESTful API and dashboard, covering the full customer-product-order lifecycle.
- Designed a scalable backend architecture on ASP.NET Core, separating concerns across API, service, and data layers for maintainability.
- Developed a responsive React/TypeScript frontend giving real-time visibility into order status and inventory.

Loop Mobile - Mobile Application with Spring Boot Backend

Technologies: Java, Spring Boot, React Native, PostgreSQL

- Built a Spring Boot backend with a layered architecture, JWT authentication, and role-based authorization to secure multi-role access.
- Designed a relational schema with JPA/Hibernate, enabling real-time data sync between the PostgreSQL backend and the React Native mobile app.

EngineersTalk'26 - Conference Landing Page & Registration System

Technologies: React (Vite), Express.js, Google Sheets API, reCAPTCHA, Gmail API | Live: enginnerstalk.vercel.app

- Built and shipped a live full-stack conference platform for Engineer Brains Club's flagship event, pairing a React/Vite frontend with an Express backend.
- Implemented a reCAPTCHA-protected registration flow with KVKK consent handling to secure and validate public submissions.
- Integrated Google Sheets API as the registration data store, adding duplicate-entry detection and automatic append logic.
- Added optional Gmail-based confirmation email delivery, completing the end-to-end registration experience.

SKILLS

Programming Languages: Java, C#, TypeScript, JavaScript, Python, C++

Backend Technologies: Spring Boot, ASP.NET Core (.NET), Node.js, Express.js, NestJS

Frontend & Mobile Development: React, React Native (Expo), HTML, CSS, Tailwind CSS

Databases: PostgreSQL, MySQL, MongoDB, Microsoft SQL Server, Firebase

Tools: Git, GitHub, Postman, Jira

Concepts: REST APIs, Agile, Data Analysis, System Design, Problem Solving, Design Patterns, Clean Code

LANGUAGES

Turkish: Native

English: B2

CERTIFICATES

Software Engineering Intern Certificate - HackerRank, May 2026

Python 101 - Turkcell Geleceği Yazarlar, March 2025

Microsoft SQL Server 101 - Turkcell Geleceği Yazarlar, March 2025

HTML5 ile Web Geliştirme - BTK Akademi, March 2025

Version Control: Git and GitHub - BTK Akademi, January 2026
